

THE PRES SUBWOOFERS

Subwoofer PR

This subwoofer uses a dual voice coil 15" bass driver and a rear-firing 12" passive radiator. The PR is designed to maximize output in the 25 - 90hz range and at 93db efficiency is efficient enough to use even with small amplifiers. Corner placement can be very effective.

39"h x 19 1/4"w x 13 1/4"d

Subwoofer FH

The FH is a small folded horn subwoofer design. Although small, it is capable of output down to 25hz. The 88db efficiency makes it most effective when used near a room boundary or corner. We suggest that it be placed on a small stand like the Chicago Speaker Stand CD-1 and near a corner. This little subwoofer is unobtrusive and very effective with smaller monitor or satellite speakers. It uses a 10" bass driver and is available in the dual voice coil or single voice coil version.

18 1/4"h x 14"w x 17 1/2"d

Subwoofer TL

The transmission line is, in our opinion, the most effective, accurate and seamless subwoofer design there is. With output down to 20hz, it is so smooth and even in its response you hardly know it's there. It's the kind of subwoofer you notice more from its absence than its presence. The PRES TL uses a 10" bass driver with either the dual or single voice coil option. The TL is available in two configurations.

C1: 62 1/4"w x 27 1/4"d x 17 1/4"h

C2: 36 3/4"h x 26 1/4"d x 14 1/4"w
